

The document contains the initial investigation of the Trestle Property Metadata PDF, which lists all field name, datatypes, data size and description of all fields in the CRMLSoldYYYYMM.csv files. The investigation identifies three categories of fields: core indicators, other fields of interest and do not use fields. Core fields are the two fields which the initial filtering to residential, single-family dwellings will use as well as basic dwelling characteristics that we require, in other words we do drop any row with a null value for these fields. Other fields of interest examine other columns that will initially be considered in the exploratory data analysis and may be kept or dropped. Do not use fields are fields that are only relevant to a house that has been listed and should not be considered for the model. Three tables have been provided, one for each category. Note that the do not use fields table gives examples but is not comprehensive.

CORE INDICATORS (NULLS dropped)		
Column(s)	Description	Post EDA Comment
ClotPrice (TARGET)	Amount the purchaser paid for the property	
Propetytype	Filter for "Residential" only (then drop the column)	
PropertySubType	Filter for "SingleFamilyResidence" only (then drop the column)	
BedroomsTotal	Number of bedrooms in the residence	
BathroomsTotalInteger	Sum of the number of bathrooms (e.g. 2 full + 1 half = 3)	
LivingArea	Total livable area in the structure (need to check LivingAreaUnits columns for consistency or do conversion)	
PostalCode	5 digit zip code as a STRING	

OTHER FIELDS OF POSSIBLE INTEREST		
Column(s)	Description	Post EDA Comment
AdditionalParcelsDescription	List of parcel IDs included in the sale	
AssociationFee & AssociationFeeFrequency	Fee paid by the homeowner to HOA & frequency (e.g. Weekly, Monthly, Biannually, Annually)	
BuildingAreaTotal & BuildingAreaUnits	Total area of the structure - finished and unfinished (need to check units for consistency) & compare to LivingArea	
City	City of the listing address – useful for aggregates based on city	
DirectionFaces	Compass direction of the main entrance (e.g. North, North-West) – personal curiosity if this has any predictive value	
GarageYN & GarageSpaces	Boolean indicating a garage & number of spaces in the garage	
LotSizeSquareFeet OR LotSizeAcres OR LotSizeArea & LotSizeUnits	Total size of the lot in various units	
MainLevelBedrooms & MainlevelBathrooms	Number of bedrooms/bathrooms on the main level respectively	
OtherStructures	ENUM – e.g. Guest House, Shed etc.	
PropertyAttachedYN	Description mention duplexes, should be “N” for single family residences?	
Rooms Total	Number of rooms in the dwelling	
Stories	Number of floors in the property (do NOT use StoriesTotal which is number of floors in the building for multi-dwelling structures)	
View/VeiwYN & WaterfronFeatures/WaterfrontYN	Attributes related to view and waterfront – personal curiosity if this has predictive value	
YearBuilt	Year the dwelling was built – convert to age feature	

DO NOT USE FIELDS (Examples)		
Column(s)	Description	Post EDA Comment
CumulativeDaysOnMarket	Number of days the property has been listed	We want the model to be able to predict the ClosePrice for any house, not just a house that has been listed, so we exclude these columns from the model.
CurrentPrice	Description is "CurrentPrice" – is this different from ListPrice?	
ListPrice	Current listing price of the property	
ModificationTimeStamp	Timestamp of the last time the listing was modified	
OnMarketDate	Contractual date of property listing	
OriginalListPrice	Original price agreed to by seller and seller's broker	
PreviousListPrice	Most recent previous price (i.e. previous ListPrice if ListPrice was changed)	
PriceChangeTimeStamp	Timestamp for the last time ListPrice was changed	
PhotosCount	Total number of pictures included with the listing
